

# manual calc-a-time

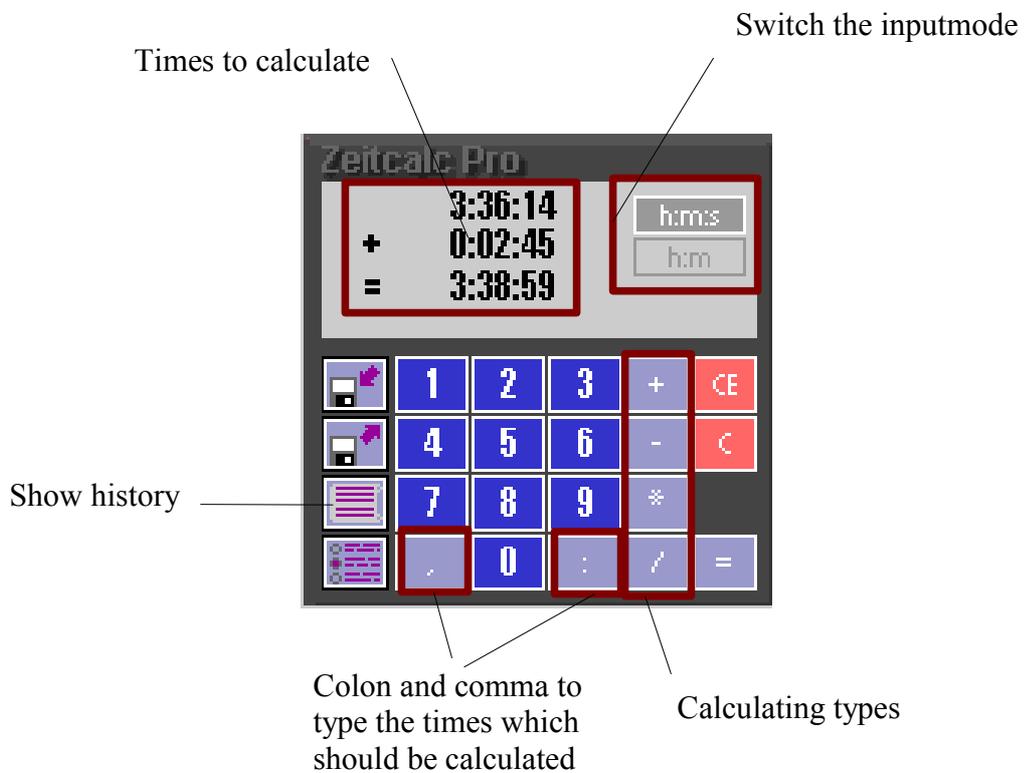

## 1.3

calc-a-time is a pocketcalculator for times. You can calculate hours, minutes and seconds. Use the colon or the comma to separate hours and minutes 7,7 hours are 7:42:00 (7 hours and 42 minutes). This short manual should help you to use calc-a-time effectively.

### Installation

Use your „Hotsync“-software to install the calcatime.prc on a Palm, and Activesync for PocketPCs setup.exe.

### Usage

### Times Input

There are two modes for timeinput: h:m:s and h:m

<i>input</i>	<i>h:m:s-Modus</i>	<i>h:m-Modus</i>
3	3 seconds	3 minutes
3:36	3 minutes 36 seconds	3 Stunden 36 minutes
3:36:34	3 hours 36 minutes 34 seconds	Input not possible

Change the modes with these buttons

calc-a-time calculates in both modes with a second-precision, only the input is limited in h:m mode to hours and minutes.

The h:-mode is for persons who normally use hours and minutes only. These persons don't need to add :00 after each time with the h:m mode for the (not used) seconds.

### **multiplication:**

There is no sense in multiplying two times, so you can only multiply a time with a factor. If you want a factor, that is not a whole number, use the comma to separate: 1:35:42 \* 1,5

### **dividing:**

Two possibilities: if you divide two times (with colons) you get a factor as result. If you divide with a factor, you get a time.

examples:

- $3:36 / 1:11 = 3,04$  (1:11 fits 3,04-times in 3:36)
- $3:36 / 0:04 = 54.00$  (0:04 fits 54-times in 3:36)
- $3:36 / 4 = 00:54$  (3:36 in four pieces is 00:54)
- $3:37 / 4 = 0:00:54$  Rest:1 (3:37 in four pieces is 0:54 with the rest of 1 second)
- $3:35 / 4,5 = 0:00:47$  rest:4

### **History**

calc-a-time holds all calculated steps in a history:

back

Clear the history

Since the 1.2 version you can export your history to the memo by using the export button (not showing in this screenshot)

### **Evaluation and registering**

The evaluationcopy runs 14 days without any restrictions. Afterwards you have to register or delete calc-a-time. Obtain your code at [pdassi.com/pdassi.nl/pdassi.es](http://pdassi.com/pdassi.nl/pdassi.es). Call the menu and tap register.

Type the registrationnumber into the field and press register. Your code contains only numbers (0 is zero and not a capital O)

### **Licence**

The zipfile you downloaded contains the legal agreement. Please read it carefully before using calc-a-time.

Have fun while using calc-a-time. If you have suggestions or questions contact us at: [feedback@mobibone.com](mailto:feedback@mobibone.com)
