1. Introduction

Thank you for trying out Address Book Rename Tool, a handy utility to quickly enter information about a company into your Address Book database. It is useful if you have many contacts working in a same company.

1.1 Contents

The distribution archive contains following files:

ABRenameTool.prc   The Address Book Rename Tool program file
ABrt.pdf   User's manual in PDF format
Readme.txt   Installation and release notes

1.2 System Requirements

Address Book Rename Tool requires PalmOS 2.0 or later. It takes up 18 Kb of RAM on the device.

## 1.3 Installing AB Rename Tool

ABRenameTool.prc needs to be installed on your PalmOS ® - powered device to use the software. Usually this is done using Palm Install Tool. Please refer to the documentation that came with your handheld for instructions on how to use the Palm Install Tool.Usage

2. Application overview

2.1 Using AB Rename Tool

Fig. 2.1.1 – application screen

On the upwards screenshot, user entered all the attributes for company named "Macrosoft corp.". When user presses OK button, all the contacts which work in Macrosoft corp. will have the Address, City, Zip Code and Country fields entered as above. Company's e-mail domain will be changed to "microsoft.com". Also, company name will be changed to "Microsoft corp.". If you leave one of the fields blank, it will not be changed. However, you must enter at least one field to change.

E-mail domain change in this example means that e-mail address "UserName@Domain" will be changed to "UserName@microsoft.com".

Please note that there is no Undo function currently available, so enter fields carefully.

All the fields except company name can be horizontally scrolled with hardware up/down buttons (which corresponds to left/right scrolling).

If the company name does not fit entirely in the field, scroll buttons will appear on the screen.

Preferences screen contains the option "Replace only empty fields". Check "Replace only empty fields" to ensure that only empty fields are modified by Address Book Rename Tool. Note that "E-Mail Domain" and "Company name" fields will be set regardless of this setting.
